SUMMARY

M.Tech student skilled in Machine Learning, Deep Learning, and Generative AI, with experience in data preprocessing, model building, evaluation, and deployment. Seeking an entry-level Data Scientist or ML Engineer role to apply analytical skills.

EDUCATION

KJSCE Vidyavihar — Mumbai, Maharashtra
Master of Technology in Artificial Intelligence and Data Science, 8.25/10 CGPA — *2025 – 2027*

Vellore Institute of Technology — Bhopal, Madhya Pradesh
Bachelor of Technology in Computer Science, 8.73/10 CGPA — *2021 – 2025*

Kendriya Vidyalaya — Coimbatore, Tamil Nadu
Class XII – 94.8% — *2019 – 2020*

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **Data Science:** Machine Learning, Deep Learning, Natural Language Processing, LLMs, RAG
- **Libraries & Frameworks:** Scikit-learn, TensorFlow/Keras, XGBoost, LangChain, Pandas, NumPy
- **Deployment & Tools:** FastAPI, Streamlit, Git, Render

PROJECTS

AskMyDocs: RAG-based AI Document Assistant — *Live Demo*
LangChain · ChromaDB · Mistral AI · RAG · Vector Embeddings · Streamlit

- Built a RAG pipeline using **LangChain** and **Mistral AI** with recursive chunking and **ChromaDB** vector store with MMR retrieval for natural language querying over PDFs.
- Developed a custom eval framework measuring semantic similarity and faithfulness across test cases; optimized retrieval and prompting to reduce average query latency.
- Deployed a Streamlit app with real-time document ingestion, source passage transparency, and persistent chat history, delivering a production-ready end-to-end document Q&A system.

Moodline: Real-Time Emotion Recognition Engine — *Live Demo*
FastAPI · TensorFlow/Keras · BiGRU · REST API · Render

- Built a text emotion classifier detecting 6 emotions, benchmarking RNN, LSTM, and GRU before selecting a **Bidirectional GRU** for best performance.
- Engineered an async **FastAPI** backend with lifespan pre-loading of the model, handling class imbalance and overfitting via weighted training and EarlyStopping.
- Deployed the full ML application on **Render** via GitHub CI/CD with a JavaScript frontend, enabling public access with live, real-time emotion predictions.

CrediShield: Credit Risk Assessment using XGBoost & SHAP — *Live Demo*
XGBoost · SHAP · FastAPI · Scikit-learn · Pandas

- Engineered a credit risk pipeline on **32,416** loan records, handling **78:22** class imbalance and missing-value imputation across 11 features via ColumnTransformer pipelines.
- Tuned **XGBoost** via RandomizedSearchCV (150 iterations, 5-fold) optimizing PR-AUC, achieving **92% accuracy** and **0.81 F1-score** on the default class, outperforming Logistic Regression by 16%.
- Deployed a **FastAPI** backend with SHAP-based explainability and Platt-calibrated probabilities, serving real-time risk predictions through an interactive underwriting dashboard.

EXTRA-CURRICULAR AND ACHIEVEMENTS

- **Competitive Exams:** Qualified UPSC NDA, CGCAT, and AFCAT written examinations.
- **Editorial Lead, Insights Club:** Published 12 monthly newsletters and annual college magazine.

ADDITIONAL INFORMATION

Hobbies: Gaming, Fitness | **Languages:** English, Hindi
